

Advisor Graphix Alpha Pager

Communications on the move

The Advisor Graphix is one of the most advanced pager available. The pager offers users an 8-line LCD screen which makes messages simple to read with a single glance at the screen. There is also the option to change to four-line display for a larger view of your messages.

The Advisor Graphix also uses the latest Flex™ technology to give users extended battery life and pager reliability.

The Advisor Graphix memory is also the largest ever available, able to hold up to 30,000* characters in the 26 message slots.

The pager has been designed with the future of paging at the forefront. The capacity will allow information to be delivered in depth to the pager, and there is also the ability to send graphics to the pager.

In addition to the new features, standard paging facilities are also available, for example, a variety of alerts, message lock and erase, alarms, low battery indicator and backlit display.

The Advisor Graphix is the only pager that has Over-The-Air Programming facility when you connect to the PageOne network. This means changes or updates can be made to your pager without the need to return the pager. PageOne Communications was the first European paging operator to introduce a dedicated Flex paging network.

Features and Benefits

- Quiet time facility
- Memory retention when pager is switched off
- The only pager that can have Over-The-Air Programming facility
- 16 address slots

* The Advisor Graphix is available initially with a 240-character message capacity.

The Advisor Graphix combines advanced wide screen technology with a premium feature set. Remarkably clear graphic and text-based messages can be displayed simultaneously. A user-friendly organiser feature allows messages to be stored in one of five relevant folders, such as 'task list' and 'phone list'. The 8 to 4 line zoom control serves to further enhance overall ease of use.
