

LS350 Numeric Pager

Communications on the move

Ultimate Flexibility

The LS350 numeric pager is part of TH Comms business product range.

A glance down at the top mounted 12-digit display will tell you exactly which number to ring and when the message was received.

Numbers can signify pre-arranged codes, for example 925 207 1030 could mean "I'm at work call me at 10.30".

Greater Versatility

With up to 20 digits available per message, codes can be as sophisticated as you like, and you can store up to 30 messages for future reference.

Faster Communication

The LS350 numeric pager can be connected to any network pending frequency. If you connect to the PageOne network, you can rely on your message coming through in seconds because PageOne uses advanced satellite technology to send the message to transmitter sites across the country and through to you.

Easy To Use

To send a message, simply dial your pager number with the prefix 07623 and using your touchtone telephone type in your message or contact the 24-hour Paging Call Centre, quote your pager number and leave the message with the Call Centre operator.
